Major Infrastructure Surveying

Monteath & Powys Surveying Services have supported major project construction within NSW since the 1960s. The provision of survey teams to set out works for power stations, mining projects, aluminium smelters, coal loading facilities, airports, rail and road construction works has enabled the development of expertise and systems of safe operation essential to this client base.

We value our relationships with many of our clients who have retained our services as preferred suppliers subject to review and audit. Our experience in providing the surveying component to a multi-discipline team of construction specialists, offers cost and schedule improvements, as a consequence of early identification of efficiencies and options for improvement.

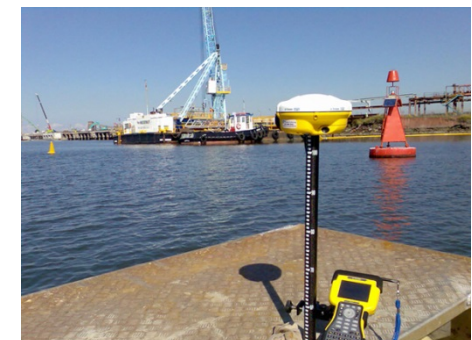

Monteath & Powys offers to engage fully with the Project Management Team to provide the maximum benefits of integration and team work.

We currently manage over 12 surveying field crews across a diverse range of projects having construction budgets from \$50,000.00 to \$2 billion.

Our company offers ongoing services to many of these clients into their operational phase after construction. These services assist preventative maintenance programs to ensure safety and long life of these assets for the client.

Typical services include ongoing monitoring of alignment and level of structures and facilities such as machine and crane rails, buildings, stockpiles and deformation reports.

Very precise surveys of machinery and structures are offered, together with 3D modelling using terrestrial laser scanning technology and GPS tracking systems.

SERVICES

- Topographic surveys
- Dimensional control surveys
- Geographic Information Systems (GIS)
- Construction set out surveys
- Aerial mapping control surveys
- Environmental surveys
- Machine alignment surveys
- High precision sub-millimetre surveys
- Audit surveys
- Bathymetric surveys
- Volumetric surveys
